

# Clean & Well-Maintained Stadiums: Enhancing Your Patrons' Experience.

**Olinga Services is your facilities management services provider dedicated to excellence, integrity and a holistic approach to your needs. We integrate technology, sustainability and quality into every aspect of our services.**

## **Our services include:**

- Facilities cleaning
- Event and function cleaning
- Waste Solutions
- Automation
- Glass cleaning
- Workforce solutions
- Asset protection surface coatings

## **Our clients include:**

## **Asset Protection**

Olinga Services exclusively uses Nordic Chem for asset protection due to the benefits, cost savings and sustainability outcomes for clients. Nordic Chem reduces the use of water, electricity and other chemicals as well as the need for deep cleaning.

Nordic Chem is a water-based coating that can be applied quickly and easily to most surfaces and has no lingering chemical odour or downtime for the application. It creates a protective layer over the surface that prevents stains, dirt and other contaminants from sticking to the surface without any change to the texture or the coefficient of friction.

With more than 25 years of experience in the coatings market, Nordic Chem has used its extensive knowledge in the chemical field to develop a water-based coating that is becoming an integral tool for the smart cleaning evolution and is used widely across Europe on public and private infrastructure and assets.

These stadiums have experienced significant benefit in applying Nordic Chem on the following surfaces at their stadium:

- High traffic walkways and around bins
- Stadium seating
- Glass surfaces and windows, especially high reach glass
- Washrooms and toilets
- Stainless steel surfaces - ticket barriers, elevators, escalators, handrails, panelling
- Stairs and tactiles
- Areas with bird droppings
- Carpeted areas and fabric surfaces
- Furniture, fixtures and fittings will be visually enhanced

## **Benefits include:**

- Prevents stains and absorption of liquids
- Spills, dirt and other residue are easy to remove, including bird droppings
- Increased hygiene standards
- Reduces use of water, chemicals and other consumables
- Eliminates limescale and mould in washrooms
- Odour reduction in toilets
- Life cycle of furniture will increase
- Reduces dirt penetration of substrata surfaces
- Reduces the need for deep cleaning

The application of the coating makes it quicker and easier for your cleaners to complete their tasks. It reduces the time required to clean mirrors and glass and eliminates the need to undertake labour intensive tasks such as polishing stainless surfaces or deep cleans.

Sustainability and CO<sub>2</sub> emission reductions are achieved by using Nordic Chem and we can provide you with the necessary reporting on these savings for your key stakeholders.

**Nordic Chem is currently applied at:**
