

Redefining Sustainable Waste Management

About Us

Olinga Services has been successfully providing a sustainable waste management program to Sydney Trains as part of our services provided at Central Walk/Metro Concourse at Central Station and manage the Metro Trains Sydney Waste Program along the North Ryde to Tallawong Line.

Commitment to Sustainability:

We aim to deliver effective sustainable waste management solutions, contributing to a greener and cleaner future. Together, we can make a significant difference.

Our Sustainable Waste Program

- Fully managed waste service
- Validated landfill diversion program
- Transparency over waste management
- No significant capital investment
- Collection of actual data & reporting
- Access to sustainability partners
- Creation of new jobs
- Long-term cost savings
- Enhancing reputation through community give-back programs.

By combining smart technologies with effective waste practices, Olinga Services helps clients reduce their environmental impact—particularly on landfill—while advancing their long-term sustainability goals. At the heart of our operations is a strong commitment to sustainability and innovation. We work collaboratively with clients to understand their specific needs and develop achievable programs with deliverable goals. This includes minimising waste, maximising material reuse, and prioritising responsible waste diversion strategies.

Process Development:

Olinga Services proposes a managed sustainable waste management solution that includes:

01 Waste Collection:

Did you know?

Traditional garbage trucks crush the rubbish collected, reducing the amount that can be diverted from landfill.

Benefits include:

- Increased diversion rates
- Improved customer experience by having clean bins on site
- Improved productivity due to single bin requirement. There is no need to have separate bins back of house for general and recycling rubbish.
- Collection techniques result in reduced compression during transport, increasing items that are eligible for recycling.

02

Waste Sorting & Separation:

We separate into Waste Streams:

- Container Deposit Scheme (CDS)
- Coffee & disposable paper cups
- Liquids
- Co-mingled Recycling
- Landfill
- Food Organics and Garden Organics (FOGO)

Whilst coffee cups are not recyclable, we have a recycling partner that processes and shreds the cups, which is combined with other plastic materials to make it suitable to upcycle into new products such as lightweight concrete slabs, garden beds and car stops. These new products are all made locally in Australia.

Our operations work closely with our waste partners to transport your recycling to a Materials Recovery Facility (MRF) for processing. With shared goals for sustainable waste management outcomes, our partners guarantee separate collection of single-streamed recycling and landfill as well as the proper disposal of each waste stream.

Did you know?

Where there might be contamination to the contents in a recycling bin, current waste collection providers will dispose of the entire contents of the bin directly to landfill.

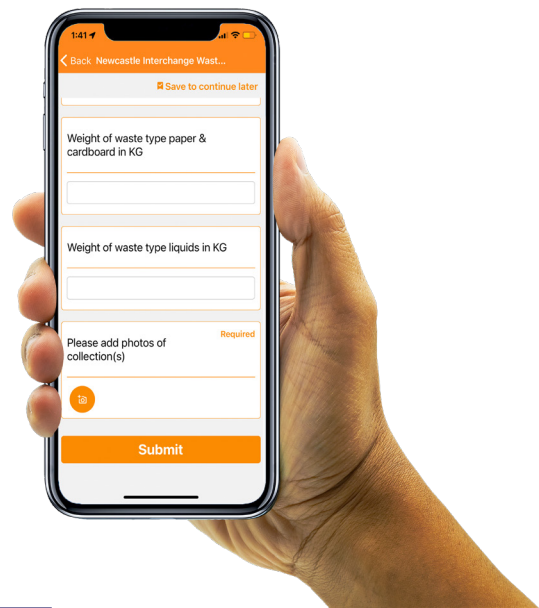

03

Verification/Validation & Reporting:

Verification/Validation & Reporting: Olinga Services will systematically collect and analyse relevant data at every stage of the process. Our proprietary electronic reporting systems allow for data capture at multiple points and enable our operations team to provide real-time reporting to our clients.

Reporting includes:

- Weighing gross weight on pick up
- Post sorting, weight and photos of each waste stream
- Third Party reports from our partners
- Monthly and annual Corporate Emissions Reduction
- Corporate Emissions Reduction Transparency (CERT) report
- National Australian Built Environment Rating System (NABERS) reporting

04

Engagement & Education:

Engagement and education are crucial components of a sustainable waste management program. By involving the different touchpoints of the waste stream, we can foster a collective responsibility towards waste reduction and recycling, ensuring that sustainable practices are adopted and maintained in the long term. Educating patrons and tenants about proper waste disposal, the benefits of recycling, and the impact of waste on the environment helps to create a more informed and environmentally conscious society.

Our Clients:

We look forward
to building a
long-term
sustainable
future with you.
